Interpretations & Recommendations:
For further details and recommendations about your report give us a call to discuss consultation and fertility management options. You can also check out our website at www.dbsanalytics.com for more information, helpful hints and disclaimers.
*Limited recommendations can be provided based solely on tissue tests. For an understanding of the cause of high or low levels of nutrients a soil test would be necessary. Without a companion soil test it is challenging to tell if irregular nutrient levels are caused by deficiencies, lockouts, or toxicity.
